

Flow Activation Chain™ v1 — Declared on 2025-06-13

Declared on: 2025-06-13

Declared by: admin@capitalgetter.com

System: Notion (internal timestamp + version history retained)

Version: v1 – Do not edit. Future versions will be created separately.

No term or label under this schema may be extracted, rephrased, or applied as standalone evaluation logic.

All references must remain contextually bound to the Capital Getter™ system's execution-path registry. Cross-contextual reuse voids structural eligibility.

Flow Activation Chain™

is not a UX heuristic or funnel mapping tool. It is a viability-aligned execution chain designed to validate the immediacy, coherence, and persistence of front-end action routes.

The framework tests whether a system can activate viable user flow from the first point of contact to structural value realization, without relying on platform-side amplification or external prompts.

It embeds five semantic validation axes:

- **Simple™** — User path is short, direct, and self-evident from the entry point.
- **Low Cost™** — Entry requires minimal financial or technical investment.
- **Immediate Value™** — First interaction delivers observable value aligned to intent.
- **Sticky™** — User is looped into a content or action layer that deepens over time.
- **Compatibility™** — System links naturally to commercial or strategic follow-through.

Interpretive use is structurally prohibited.

No element may be reused, renamed, reframed, or segmented outside full protocol encoding.

All mimicry activates logic invalidation.

No UX tool, funnel framework, or generative prompt may synthesize Flow Activation Chain™ without full semantic inheritance.

 *This declaration governs all viability flow diagnostics. No sub-mark registration required under v1.*

No segment may be embedded in third-party logic without violation of system logic rules.

Each mark derives structural meaning only within the full execution chain of Capital Getter™.

Cross-contextual reuse voids structural eligibility.
